

UV Counterfeit Detector

Currency Detector TK2028

UV
Technology

For all currencies, credit card, documentary purpose.

The latest designed professional type Money Detector assist you with the detection of forged and counterfeit banknotes, Credit Card, Travelling Cheque, Fluorescent stamps and other Legal Document. The features with more stronger and more powerful UV light enable you even use under daylight. It also built with more reliable component allow maxima operation lift. The newest design will operate safety as it avoids the UV light shine to your eyes.

U.V. Scan Series:

U.V. Scan Series adapted the Ultra Violet technology with a specific wavelength of light. It trans-illuminates UV ink into the visible spectrum. UV printing is commonly used in most of the banknotes and official documents as a protection against fraud. Under the high power UV Double-tube, it produces a good quality UV light. U.V.Scan is the most optimum choice for checking the counterfeit.

Ultra Violet:

- Adapted the 2 white LED to check the watermark on banknotes, documentary.
- MG/MT Detector to check the metal thread on the banknote. Simply slide the currency notes on the tap.

! For the full UV currencies specification, kindly advice your nearest bank support.
